

AIDD 30-Day Challenge — Task 1

Name: Muhammad Umer Fakhri

Roll Number:00079331

“REFLECTION ACTIVITY”

Q. How AI and human creativity combine to create a new AI-Native Era?

Q. Why developers are now becoming AI collaborators, not just coders?

Q. What made October 2025 the global AI Turning Point?

Q. What does AI-Driven Development mean to you?

Q. How do you see the future of Human–AI Collaboration in software development?

Answer: For me AIDD(Artificial Intelligence Driven Development)means that we have entered in the new world in which developer doesn't do only coding ,they also collaborated with the artificial intelligence and can make different kind of software. Back in Early 2000s we the coders have to write the code completely and the most irritating part is when we forgot a single “semi colon (;)” and got frustrated coz we cant find that error after reading again and again but thanks to the Ai development we the coders can now code in rapid time

After reading the document I came to know that October 2025 was the time Ai industry got boomed and now Ai is not just a tool its like co-developer and for developer a true friend

Now AI is all in one platform even it can make a fully functional ecommerce website. Now the roles have got swapped up we the

coders just need to analyze the situation and give directions AI how to evaluate the scenario and make it creative and unique code

What I personally think that AI will act a partner/collaborator and this relation would be too strong coz Ai is also a machine they can do repetitive task without getting bored and we humans(coders) would give them innovative ideas and our only focus would be to strategize the situation

It's a trend nowadays that Ai would replace human but in my eyes I would say that Ai would replace if we won't adopt the Ai we would be oscilite from the competitive market

If I would quote it up, I would say if we adopt this it would be $1 + 1 = 11$

We all watch science fictional movies and know about super powers so if we adopt Ai it can become our super power we would no longer be called as an ordinary developer. Ai would increase both our speed and quality

As you people know how fast the time can pass and all aware of value of time so if we adopt this up we can make multiple projects even in a day

In short, Human + AI = Future.

“Multiple Choice Questions”

Q1 What is the main purpose of the AI-Native Era?

- a) Replace developers
- b) Empower developers through AI tools**
- c) Eliminate coding
- d) Automate testing

Q2 What defines an AI-driven developer?

- a) Writes only syntax
- b) Creates context-aware prompts**
- c) Avoids tools
- d) Works offline

Q3 What does “AIDD” stand for?

- a) AI-Integrated Data Design
- b) AI-Driven Development**
- c) Automated IDE Deployment
- d) Adaptive Input Debugger

Q4 What is the focus of Evaluation-Driven Development (EvDD)?

- a) Manual coding
- b) Evaluating and improving AI outputs**
- c) UI design
- d) Testing only

Q5 What should developers focus on in the AI era?

- a) Syntax only
- b) Building reasoning + evaluation skills**
- c) Avoiding AI tools
- d) Manual workflows
